Track

Physical Anchor

X   Y

Directions: Print this image out (it should be 7" x 7") and place it somewhere in your scene. Using the "scan room" feature, capture your scene, making sure that this image is visible at some point and detected. When recording video in the app, once again ensure that this image is detected and the two will be automatically lined up. It is recommended that you use this in conjunction with anchorless alignment.
